

SUCCESS STORY

TURNKEY® RHINO - RIPPER

Location : South West - France

Customer : GARROT CHAILLAC

Machine : DOZER - CATERPILLAR

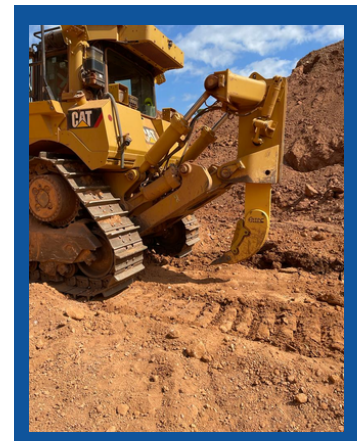

The Quarry customer was looking to fit a ripper on his dozer and, was looking for a locking system that was safe and easy to install and disassembly.

He decided to trust us, following a specific study by the manufacturer FLEXO-SOUDE.

We chose the TURNKEY® Rhino locking system for its simplicity, ease of use and safety, which covers both ears of the tooth with a perfect fit.

The shape of the teeth is perfect for the work required, and the locking system provides a high degree of safety for the assembly and disassembly of my operators.
